

This is a simplified description of the workflow using the FPA.

Detailed instructions with all the ifs and buts can be found elsewhere.

- 1) Upload the script to your Joomla! Site Root "/" directory. Run the script through your browser.
- 2) When the script has finished you will see a large form on your screen with loads of information about your site. The attached picture only shows the top part of the form. This form is for you to look at, and is **NOT** to be posted to the forum.

2

FORUM POST ASSISTANT

- 3) When you are finished studying all the information, and want to create the output to the forum, locate the big button labeled “Show the Forum Post Assistant” and click the button.

After use, [Click Here](#) to delete this script.

Show the **Forum Post Assistant**

3

- 4) Read the instructions. The default run time options are usually fine.
5) Generate the output.

Hide the **Forum Post Assistant**

4

Instructions

1. Enter your problem description *(optional)*
2. Enter any error messages you see *(optional)*
3. Enter any actions taken to resolve the issue *(optional)*
4. Select detail level options of output *(optional)*
5. Click the [Click Here To Generate Post](#) button to build the post content
6. Copy the contents of the [Post Detail](#) box and paste it into a post following the instructions below the generated text box

Optional Information

Problem Description:

Log/Error Message:

Last Error(s) Reported:
auto-completed from your php error log

Actions Taken To Resolve:

Leave ALL fields blank/empty to simply post diagnostic information.

Run-Time Options

Optional Settings :

- ☒ Show elevated folder permissions
- ☒ Show database table statistics
- ☒ Show Components
- ☒ Show Modules
- ☒ Show Plugins
- ☒ Show Core Extensions

Information Privacy :

- ☐ None
No elements are masked
- ☒ Partial (default)
Some elements are masked
- ☐ Strict
All identifiable elements are masked

5

[CLICK HERE TO GENERATE POST](#) [reset](#)

Click the [Click Here To Generate Post](#) button to build the post content

☐ PHP "Out of Memory" or "Execution Time-Outs" errors?
Temporarily increase PHP Memory and Execution Time

- 6) This is the generated BBCode to be copied and pasted into the forum post.
- 7) Check that the generated code fits into a forum post.
- 8) Follow the instructions.

```

To copy the contents of the Post Detail box:

- 1.) Place the cursor in the above box of generated text.
- 2.) Use CTRL-a to select all the text within the box.
- 3.) Use CTRL-c to copy the generated text to the browser clipboard.
- 4.) Use CTRL-v to paste the copied text into your forum posting at the desired spot.
- 5.) Disable smilies to prevent characters being converted by the forums software.

If your site has many extensions installed, the forum post output could exceed the posting limit. If this happens, use more than one post, and utilize the optional settings to divide the output. Try generating first without plugins, and next with plugins but without components and modules.

Maximum number of characters pr. post are 20.000 Count Characters 15495

- 9) In the forum, reply to the post asking for FPA, or create a new post if you are starting a new thread.
- 10) Paste the generated output into the post.
- 11) Disable smilies.
- 12) Preview the post.
